

Integer manipulations

The Perl 6 integer test report

The integer is in perl the most important type so we need to do our best to test it thoroughly. First we declare a constant to be used later and an integer without a value.

```
constant ABC = 10;
my Int $i;
nok $i.defined, 'T0';
ok $i ~~ Int, 'T1';
todo 'D2', 1;
ok $i !~~ Int, 'D3';
ok $i ~~ Cool, 'T4';
```

- ✓ **T1:** Declaration of an integer without an assignment of a value, should result in an undefinedness.
- 🚫 **T2:** But when defined or not, its type value can be compared.
- Next test is a todo test:** Someday we might make this not fail when wormhole modules are installed
- 🚫 **D4:** The opposite test should fail
- ✓ **T5:** Also inherited classes should be compared successfully.

Operations

Next a few tests to see if operations can be applied to the integer

```
$i = ABC;
is $i, 10, 'T5';
```

- 🚫 **T6:** Initialize Int with the constant seems to have done well

```
if ?"We are not stupid" {
  skip 'S6', 2;

  } else {
    ok 10 < 7, 'S7';
    ok 11 / 0, 'S8';
  }
  todo 'D9', 2;
  is $i, 11, 'D10';
  like $i.Str, /'not 10, but text'/, 'D11';
```

Next 2 tests are skipped tests: Two lines are skipped because these are stupid tests

- 🚫 **S8:** 10 not smaller than 7
- 🚫 **S9:** Won't work in this universe

Next 2 tests are todo tests: Incredible tests which will be true in the not so distant future

- 📄 **D11:** Integer is 10 not 11
- 🚫 **D12:** test some text

```
for ^10 {
  ok $^a < 7, 'T12';
}
```

T13: test a series of numbers against 7

```
for ^11 {
  todo 'D13', 11;
  ok $^a > 8, 'D14';
}
```

Next 11 tests are todo tests: Should make todos with this test

D15: test a series of numbers against 8

```
my Int $i2 = 20304;
todo 'B15', 2;
is $i2, 20304, 'B16';
is $i2 - 20305, 1, 'B17';
```

Next 2 tests are bug issue tests: Mentioned a few bugs from the issues list on github

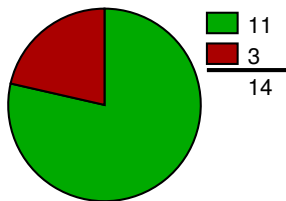

B17: ok, for now

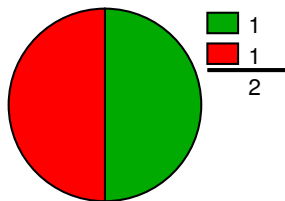

B18: not ok
