

Semi XML project summary report

Testing the basic use of SemiXML

Purpose of this report is that it tests the parsing and translating process of the several parts of the language. Here only the simple structures are tested and not the methods to generate new content.

The tests comprises the following chapters

- Generate a simple element
- Add attributes.
- Nested elements.
- Element blocks and their different types.

Tested on 2018-02-21 14:17:13 (zulu), on fedora 26, linux, 4.14.18.200.fc.26.x.86._.64

All tests are 100% successful

Configuration metrics

TODO: Tests for 'configuration' must be designed and run

Sigils metrics

TODO: Tests for 'sigils' must be designed and run

Core-module metrics

TODO: Tests for 'core-module' must be designed and run

Testing the module LoremIpsum

Purpose of this report is to test the module LoremIpsum. The module is ment to generate text as a temporary fill of elements. This can help to have an impression of a page without being extracted by content.

The tests comprises the following chapters

- Generate a simple element

Tested on 2018-02-24 13:37:04 (zulu), on fedora 26, linux, 4.14.18.200.fc.26.x.86._.64

All tests are 100% successful

Documentation metrics

TODO: Tests for 'documentation' must be designed and run

And here we are at the end of it all.

Lots to do now but lets not give up hope and struggle on.
