

# Integer manipulations

## The Perl 6 integer test report

The integer is in perl the most important type so we need to do our best to test it thoroughly. First we declare a constant to be used later and an integer without a value.

```
constant ABC = 10;  
5. my Int $i;  
   my Hash $h;  
   $h<test> = $i;  
   nok $i.defined, 'T0';  
   ok $i ~~ Int, 'T1';  
10. todo 'D2', 1;  
    ok $i !~~ Int, 'D3';  
    ok $i ~~ Cool, 'T4';
```

✓ **T0:** Declaration of an integer without an assignment of a value, should result in an undefinedness.

✓ **T1:** But when defined or not, its type value can be compared.

**Next D3 test is a todo test:** Someday we might make this not fail when wormhole modules are installed

📄 **D3:** The opposite test should fail

✓ **T4:** Also inherited classes should be compared successfully.

## Operations

Next a few tests to see if operations can be applied to the integer

```

$i = ABC;
is $i, 10, 'T5';
15. if ?"We are not stupid" {
    skip 'S6', 2;
}
else {
    ok 10 < 7, 'S7';
20. ok 11 / 0, 'S8';
}
todo 'D9', 2;
is $i, 11, 'D10';
like $i.Str, /'not 10, but text'/, 'D11';
25. for ^10 {
    ok $^a < 7, 'T12';
}
for ^11 {
    todo 'D13', 1;
30. ok $^a > 8, 'D14';
}
my Int $i2 = 20304;
todo 'B15', 2;
is $i2, 20304, 'B16';
35. is $i2 - 20305, 1, 'B17';

```

✓ T5: Initialize Int with the constant seems to have done well

**Next 2 tests (S7-8) might be skipped:** Two lines are skipped because these are stupid tests

☆☆ S7: 10 not smaller than 7

☆☆ S8: Won't work in this universe

**Next 2 tests (D10-11) are todo tests:** Incredible tests which will be true in the not so distant future

📄 D10: Integer is 10 not 11

📄 D11: test some text

✓7 ✗3 T12: test a series of numbers against 7

**Next D14 test is a todo test:** Should make todos with this test

📄2 📄9 D14: test a series of numbers against 8

**Next 2 tests (B16-17) are bug issue tests:** Mentioned a few bugs from the issues list on github

📄 B16: ok, for now

📄 B17: not ok
